---

### Mandriva 2011 RC2 isos have been released

**Congrats to Mandriva staff** for new features in Mandriva 2011, like rpm5, systemd, ...

**Congrats to Rosalab staff** for the new UI for KDE, very beautiful and easy to use for everyone.

**Congrats to Conectiva staff** for having focused in so many Educational apps.

But, unfortunately, a big issue still plagues the distro: a very old and buggy kernel 2.6.38, and not the newer 3.0.0.

The new stable kernel 3.0.0 should bring a lot of enhancements in many areas: Energy saving, Wi-fi speed, Desktop responsiveness, and so on...

If not, still more than one month to its launch, it would be certainly **a big shame...**
