Mandriva isos content:

#### Hybrid isos

All 2010 isos are hybrid isos. You can dump it on a USB key and use this key as an install media. Please find GUI tool to create it: `mandriva-seed.sh` for Linux platforms, `mandriva-seed-windows.zip` for Windows one.

#### One edition

The One edition of Mandriva Linux is a Live CD. A Live CD is an operating system which boots and runs directly from CD, with no installation required, and without making any permanent change to the system on which it runs. Mandriva One, however, is a hybrid Live CD, meaning it also has an installer allowing it to be installed to the system's hard disk, should the user so desire. The small size of Mandriva One also makes it ideal for users with slow or bandwidth limited Internet connections.
