

Warsow 0.6 for Mandriva Linux 2010.1/2010.2

Warsow is a completely free fastpaced first-person shooter (FPS) set in a futuristic cartoon-like world.

Uno sparatutto basato sul motore di Quake 3D, è ritenuto, per ottime ragioni, a partire dalla grafica stupefacente, uno dei migliori giochi per Linux.

Set in a futuristic cartoon-like world where rocketlauncher-wielding pigs and lasergun-carrying cyberpunks roam the streets, Warsow is a completely free fast-paced first-person shooter (FPS) for Windows, Linux and Mac OS X.

Speed and movement, that's what Warsow is all about. Like a true cyberathlete you jump, dash, dodge and walljump your way through the game. Grab those power-ups before your enemy does, plant the bomb before anyone sees you, and steal the enemy's flag before anyone knows what's going on!
