

### **Bombono DVD 1.0.2 for Mandriva Linux 2010.2**

DVD authoring program for Linux

Bombono DVD is a [DVD authoring](#) program for Linux. It is made easy to use and has nice and clean GUI (Gtk).

The main features of Bombono DVD are:

- Excellent video viewer: Timeline and Monitor
- Real WYSIWYG Menu Editor with live thumbnails

- Comfortable Drag-n-Drop support
- Transcoding, if necessary (from AVI/MKV/MOV/MPEG4...)
- Motion menus
- Subtitles support
- You can author to folder, make ISO-image or burn directly to DVD
- Reauthoring: you can import video from DVD discs

Homepage:

### Changelog 1.0.2:

- Fixes for new distros:
- libxml++ 2.33.1 changes: projects can be opened
- update for spumux, dvdauthor 0.7.0
  
- (For experts) one line setting `~/config/bombono-dvd/av_seek_shift`: set to "-N" (e.g. -4 seconds) to avoid missing keyframes/visual artefacts of videos
-

(For experts) when building with `USE_EXT_BOOST=1` & Boost  $\geq$  1.46:

- `scons CPPFLAGS='-DBOOST_FILESYSTEM_VERSION=2'`

Additionally, Dr. John v. Kampen has published [nice article and screencast](#) about Bombono DVD and OpenShot Video Editor.

Changelog 1.0.1:

- Translation updates: Ukrainian (Yuri Chornoivan), Danish, Norwegian
- Fix for loading a project: set right TV type (NTSC/PAL)
- Fix for text buttons: highlight text precisely
- Fix for ffmpeg running:
- don't break on non-text log
- 

ffmpeg  $\geq$  0.7(current trunk): `-padX` => `-vf pad=X`

Changelog 1.0:

- BmD can import all that ffmpeg can handle, not only DVD-compliant videos (AVI/MKV/MOV/TS/MPG/MPEG4/WEBM/OGG/...); excellent "frame by frame" video access is retained

- Translation updates: Finnish, French, Russian, Spanish
- Transcoding:
- Black padding for not DVD-aspect videos
- All audio streams being transcoded, not only first one
- Audio transcoding bitrate: 320kbit/s, not 448kbit/s

-

### [Bitrate Calculator](#)

- Adjust Bitrate to Fit to Disc
- Subtitles support:
- spumux is used for text rendering

-

Trying to guess subtitles encoding with [Enca](#)

- Segfault fix while loading bad/legacy projects
- Small changes:

-

Fix for non-UTF8 locales like ru\_RU.KOI8-R, [#40](#)

- Fix for running totem with a file with spaces etc
- .bmd for projects instead of .xml
- Online help reference in menu Help
