

Virtual MIDI Piano Keyboard 0.5.0 for Mandriva Linux 2010.3

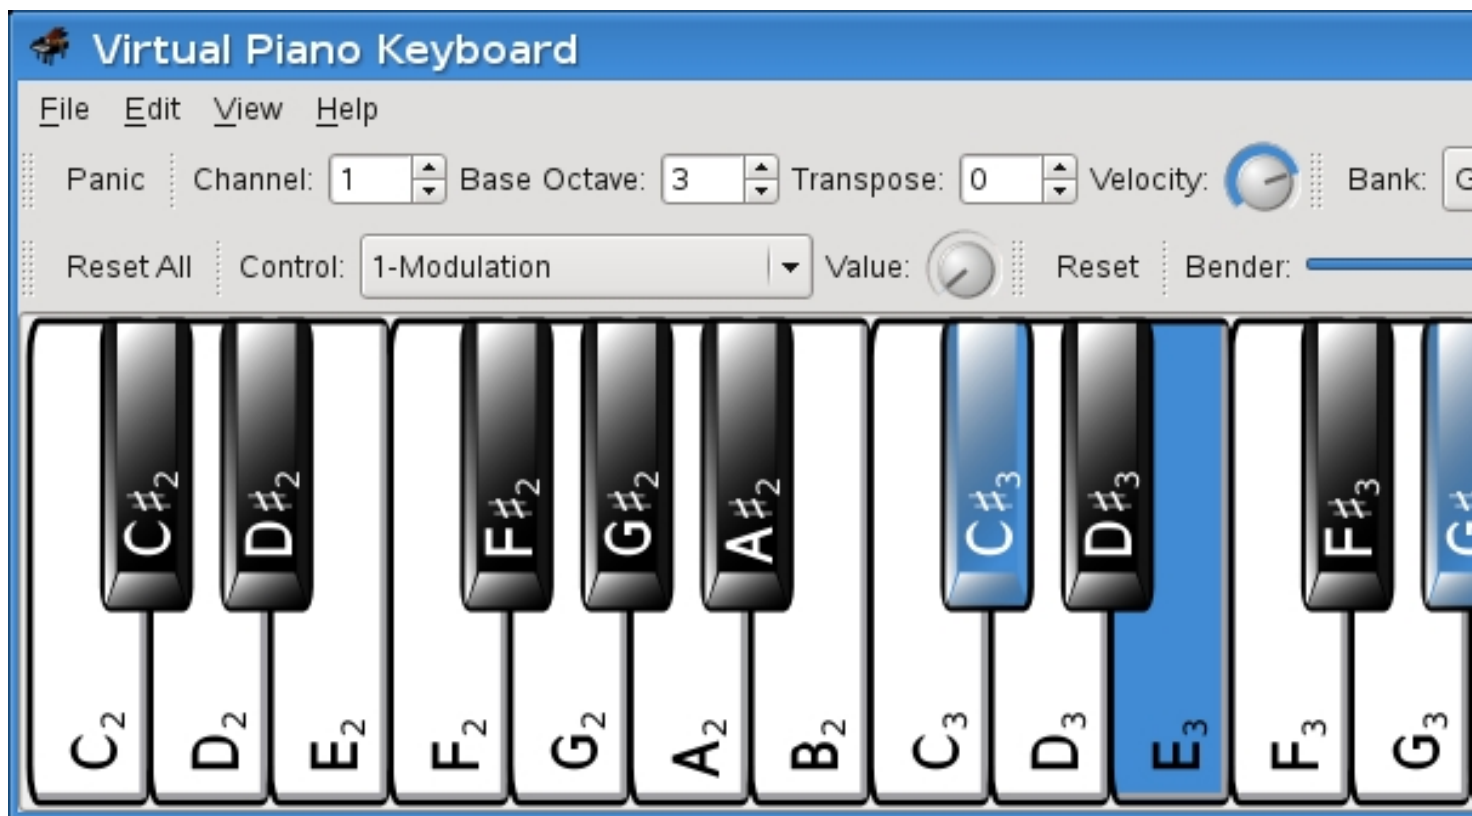

Virtual MIDI Piano Keyboard is a Qt-based MIDI events generator and receiver

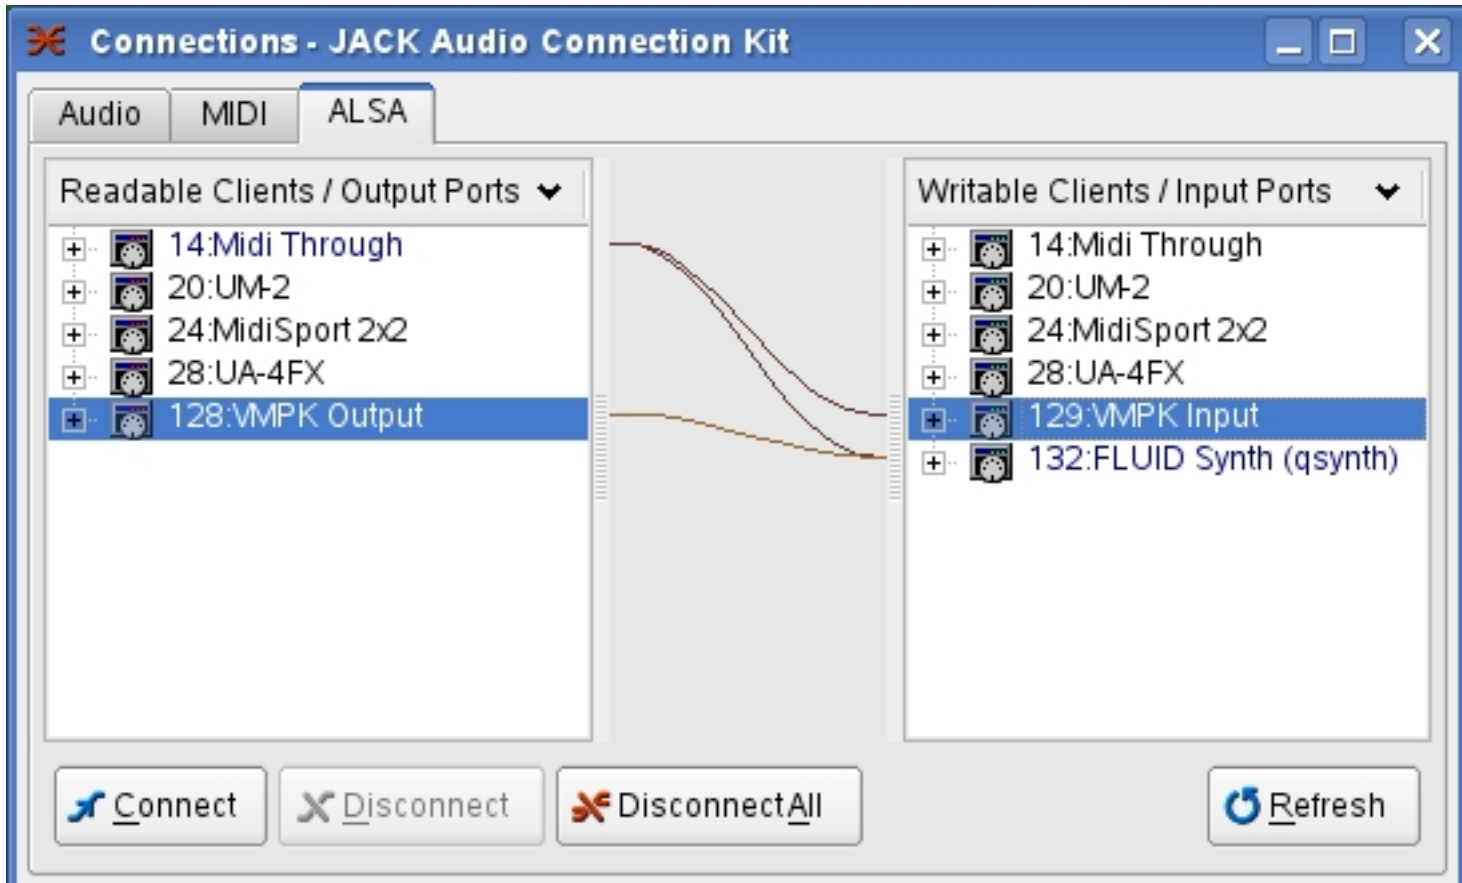

It doesn't produce any sound by itself, but can be used to drive a MIDI synthesizer (either hardware or software, internal or external). You can use the computer's keyboard to play MIDI notes, and also the mouse. You can use the Virtual MIDI Piano Keyboard to display the played MIDI notes from another instrument or MIDI file player. To do so, connect the other MIDI port to the input port of VMPK.

The binaries are built against Qt 4.8.2 (ie the release installed in the MIB-made Mandriva "2010.3"; for previous Qt versions (any ≥ 4.4 is OK), please grab the srpm file and rebuild it against your Qt libraries.
