

**GNOME Color Chooser 0.2.5** per Mandriva 2009.1 - 2008.1

GNOME Color Chooser 0.2.5 è un utility di personalizzazione della visualizzazione del desktop GTK+/GNOME.

**Requested rpm:** from volapyk user, [here](#) the Forum link.

**Official website:** <http://gnomecc.sourceforge.net/>

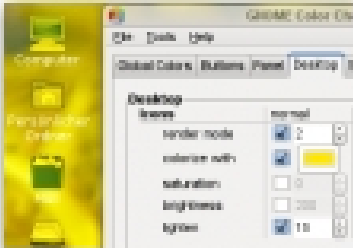

### **Description:**

GNOME Color Chooser is a GTK+/GNOME desktop appearance customization tool, but is not limited to the GNOME desktop. Unlike applications like Murrine Configurator, this utility does not modify your original themes.

### **Latest version features:**

- change colors (e.g. background, window decoration, tooltips)
- change sizes of widgets (e.g. of buttons, scrollbars or the main padding)
- allow use of bright or dark wallpapers without getting icons or panel text unreadable
- adjust the size of start and panel menus or large toolbars
- colorize desktop icons and activate hover effects (requires GNOME 2.18+)
- configure your gtk engines and let your current theme be drawn by an installed gtk engine of your choice (requires GNOME 2.18+ or engines that support the newly introduced engine schema definitions respectively)
- *\*new\** disable menubar and toolbar shadows (remove the horizontal line beneath those bars and make them flat)

### **Screenshots:**

~~Starting GNOME 2.16, the GNOME Color Chooser is no longer available. The GNOME Color Chooser is replaced by the GNOME Color Chooser (GNOME 3.4).~~
