====0.7

- add New popup icon which can change his flags
- use KConfigGroup for save favorite language
- add FavoriteLanguage config dialog

some update of the code

====0.8

IMPORTANT RELEASE :

change the algorithm of source translation. Now it use Post Method. It means that you can translate big text. And if you type 1 word, it get you the dictionary result ! :) Thanks lexnewton.

====0.9

-add new flags list ! Use a plasma::treeview with a QAbstractModel

-copy from the clipboard! Now, you just have to select a source text from anywhere, and active the popup, by clicking on the popup, or by a plasma shortcut.

-Change QTextEdit source event. Now, press Enter to translate, and press Shift+Enter to add a new line.

====1.0

Change icon

Change a lot by aseigo , use KJob, nice animation during translate.

change the structure of translatoid

Will remove voice button, because KTTSD do the same job.

add estonishlanguage

===RC

After some error of myself! This is the good one :

- Set text color with theme color

- save your automaticaly last languages in use.
