

qutIM 0.2.0 for Mandriva 2009.1 and 2010.0.

qutIM is a free open-source multi-protocol (ICQ, Jabber/GTalk/Ya.Online/LiveJournal.com, Mail.Ru, IRC etc) instant messenger for Windows and Linux systems. It's written in C++ & QT4.

Project began in January 2008 and is under active development. Main goal was to create fast and user friendly ICQ client. Nowadays qutIM provides powerful plugin system for developers, so that it can support any IM-protocol.

Some features:

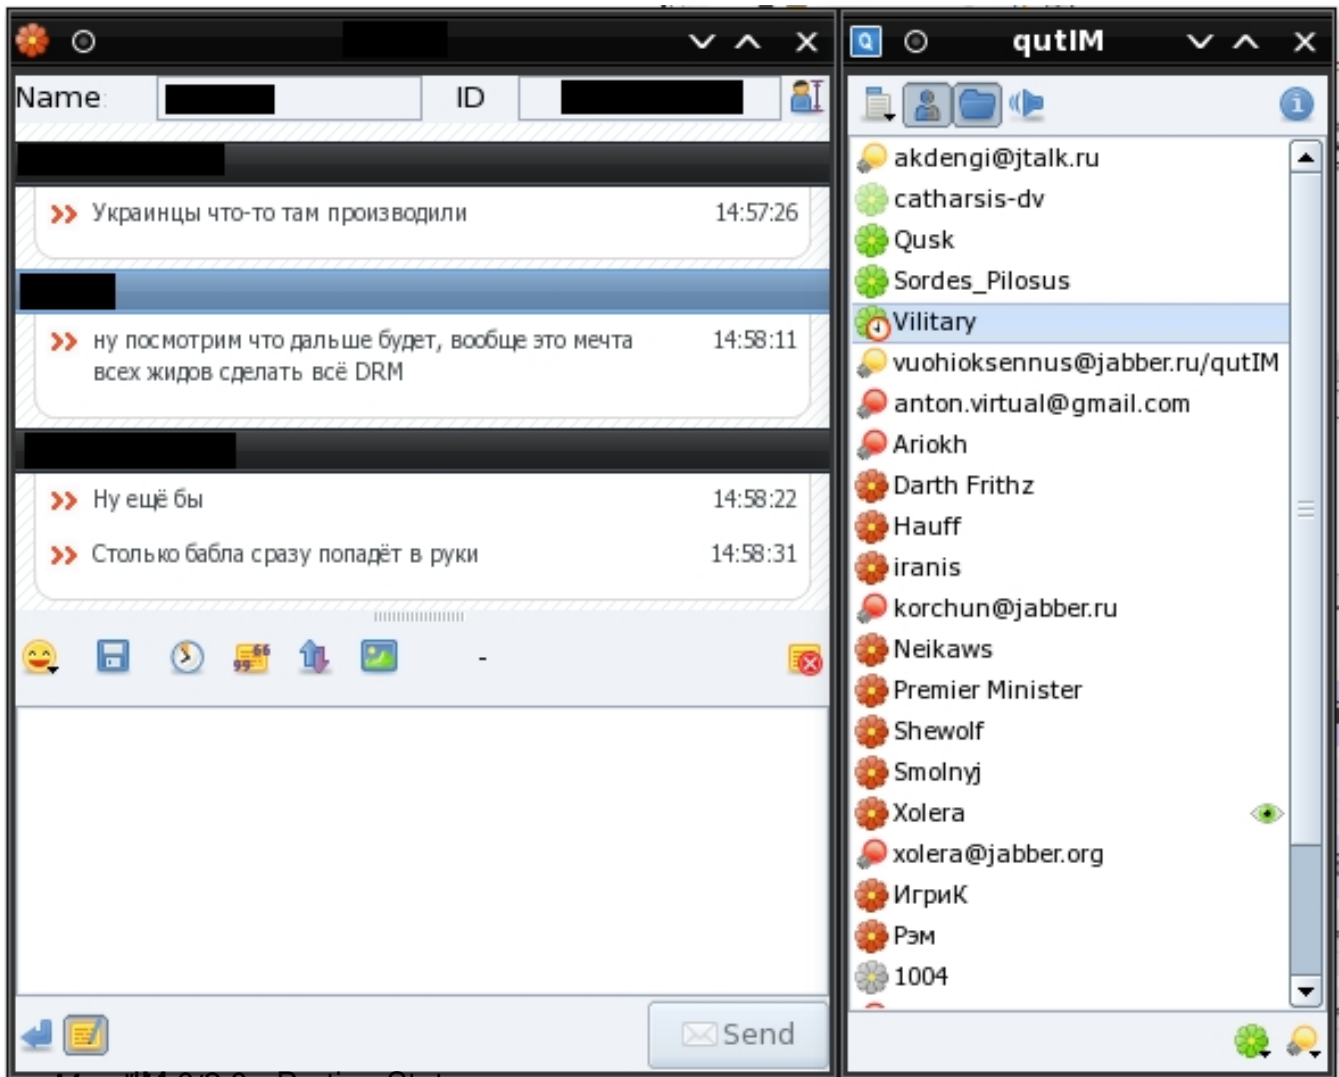

- * X-statuses (ICQ protocol ability)
- * Tabbed and windowed messaging modes
- * Anti-spam filter
- * Multiple accounts
- * Internationalization support
- * File transfers
- * HTTP and SOCKS 5 support
- * Avatar support
- * Adium status icons and animation smiles support
- * Adium styles for chat window
- * Styles for contact list, theme border

- * Sound notifications support
- * Message delivery notification support
- * Conferences support
- * Plugin support
